

Melbourne Port System Industry Induction

The need for supply chain education has been a common theme in contemporary industry discussions. To help meet this challenge Port of Melbourne is offering an industry program in the form of the Melbourne Port System Induction workshops.

The workshops include:

The Melbourne Port System	The Supply Chain
<p>The program will provide an introduction and overview of the Melbourne Port System. This will cover current trends, projected forecasts, and prospective challenges for the industry going forward. Topics of interest include: port assets and infrastructure, trade profiles, road, rail, the varying hours of operation, etc.</p>	<p>The workshops will discuss a holistic view of the wider sea freight supply chain. We will consider: who the major players are and how they interact, how the flow of information affects the flow of goods within the supply chain, and the various challenges supply chain partners face in their day to day interactions. Participants will get a good idea how their own work fits into the bigger picture.</p>
<h3>Issues & Opportunities</h3>	
<p>Participants will be asked to consider the key issues and opportunities for the industry going forward. These will include trends in shipping industry dynamics, issues in container capacity, as well as issues in productivity, and sustainability.</p>	
<h3>Port Tour</h3>	
<p>Following the activities and discussions, a waterborne tour of the Port of Melbourne will be provided. Light lunch and refreshments also provided.</p>
