

FREIGHT MART

INTERNATIONAL

Fumigation Services

Fumigation treatment facility to protect against quarantine risks

This value-added service for import and export containers (FCL) and less than container load (LCL) shipments assist customers in meeting the Australian Quarantine Biosecurity requirements. We look forward to this value-added service being of benefit to your business by reducing third party involvement in the logistics chain and providing ongoing communication regarding the status of your cargo.

Fumigant Products

- Sulfuryl Fluoride
- Methyl Bromide

With increased treatment demands such as the Brown Marmorated Stink Bug (BMSB) seasonal directives, we continue to streamline the supply chain by providing these services in-house, also minimising outsourcing and reducing overall cost with no margins on margins.
