

Security & Detection Systems

## L-3's Air Cargo Security Screening Solutions

L-3 Security & Detection Systems offers a comprehensive range of X-ray inspection systems, metal detection systems and explosive trace detection equipment for screening cargo ranging from small parcels to large packages and pallets.

With today's evolving air cargo security challenges, you need reliable, high-throughput equipment that is cost effective and compliant with newly emerging regulatory requirements. L-3 products are backed by an experienced team of support engineers throughout Australia to help you keep commerce moving.

**From 1 July 2017, all US-bound air cargo will either need to be examined or originate from a Known Consignor in order to be exported by air to the US.** With varying system tunnel sizes and configurations, L-3 can help determine the best security screening solution for your business.

The high-capacity **PX10.10-MV** x-ray with a 1m x 1m tunnel is ideal for inspecting break-bulk freight and packages for threat detection, manifest and declaration verification, contraband detection and theft prevention.

**PX10.10-MV X-Ray System**

**EMIS Screening Device**

The CEIA **EMIS** range are security screening devices designed to inspect non-metallic cargo using exclusive Electromagnet Profile Analysis technology. These devices ensure automatic detection of detonators and electronic circuits from improvised explosive devices, ammunition and weapons composed of metal. These screening devices are available in different sizes – for inspection of single packages or entire pallets.

The **QS-B220** Desktop Explosives & Drugs Trace Detector provides fast, accurate detection of trace amounts of a wide variety of military, commercial, homemade explosives, as well as drugs, with unsurpassed ease of use and minimal maintenance requirements.

**QS-B220 ETD**

L-3's broad range of air cargo screening products leverages our commitment to innovation. The company works closely with regulators and operators worldwide to develop technology with a focus on detection capability and high-throughput screening.
